

ARCHITECTURAL COATINGS CLEANING RECOMMENDATIONS

The Protech Sol-ar™ series of architectural powder coatings are organic coatings that need to be cleaned and maintained regularly to ensure that the decorative and protective properties of the coating are retained, as set forward in AAMA 2603, 2604 and 2605.

This procedure is an integral part of the warranty given for gloss and color retention as well as chalking.

The conditions are as follows:

- Regular washing of the coating with a solution of warm water and mild detergent using a soft cloth or a sponge.
- Temperature of the part to be cleaned shall not exceed 80°F (27°C).
- Isopropyl alcohol can be used for the removal of oil and grease.
- The cleaning solution should not be in contact with the powder film for more than thirty minutes.
- After cleaning, the surface should be completely rinsed with clean cold water
- A cleaning schedule should be documented and maintained.
